interval rises
About 5 seconds after the gong, gamelan starts a diminuendo; dim. for about 8 seconds to niente, till so soft that you're playing the air.
Once playing the air, slowly raise mallets to play an invisible gamelan in front of you. Maintain the pattern you've been playing, perhaps exaggerating the change to the pelog note, and gradually slow down your speed; one player (peking? whoever is in front) leads till all are playing the air, in sync, in slow motion.
* Shakuhachi solo continues during air gamelan; shakuhachi cues bonang.
Play air gamelan till the 1st bonang cue - when you hear the bonang, freeze for a couple of seconds, then slowly let your hand float down to be ready for the next section.
